ANDREW RUSSELL

Director of ICT – Lourdes Hill College

Box of Books was rolled out across the school for Back to School 2020. As an ex LearningField school, Lourdes Hill College felt Box of Books had the content they needed and the right attitude about working with other technology and solution providers, including The Alpha School System (TASS) which Lourdes Hill College has been using for their school management for nearly 10 years.

We spoke with Andrew Russell, Director of ICT at Lourdes Hill College, to find out what the school was looking for in an educational resources platform and what made them choose Box of Books. Andrew explained, "provisioning and managing the publisher interactive accounts provided a very high value to our school. Teachers and students expect everything to work on day one" which puts pressure on the IT department during these busy periods.

> **Provisioning and managing the publisher interactive accounts provided a very high value to our school. Teachers and students expect everything to work on day one.**

Midway through 2020, Box of Books and TASS announced their certified integration. Through an API, the two different systems share one central point of truth, with secure data exchange taking the guesswork out of syncing and automating. This fully tested solution removes the need for the school to contact suppliers every time they have a change or a new student or teacher starts.

Customer Story

> **The biggest benefit to the Box of Books and TASS integration is there is no need to send CSV files. All the changes are made seamlessly therefore ensuring data security and correct licensing and invoicing.**

Andrew said that "the biggest benefit to the Box of Books and TASS integration is there is no need to send CSV files. All the changes are made seamlessly therefore ensuring data security and correct licensing and invoicing". As a school purchase school, they appreciate their ability to do one class change in TASS for a student and the new books and publishers interactive accounts are automatically set up and ready for the student to use through their school log on.

"The ability for teachers to direct link to the ebook and exact page is also a benefit". Andrew feels the teachers are seeing this benefit and are starting to use it as they create assessments. Andrew looks forward to the digital insights the school will be able to have access to moving forward. He feels that by using more digital resources this will provide more insights for student outcomes and for the school.

Andrew sees "Box of Books as an integral part of the college's dream to have one platform that integrates all their systems and technology requirements within their school." Having Box of Books and TASS seamlessly integrated is one small step towards this goal.

> **Box of Books as an integral part of the college's dream to have one platform that integrates all their systems and technology requirements within their school.**
